DETAILED ACTION

Drawings

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference character(s) not mentioned in the description: 120. Corrected drawing sheets in compliance with 37 CFR 1.121(d), or amendment to the specification to add the reference character(s) in the description in compliance with 37 CFR 1.121(b) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

The disclosure is objected to because of the following informalities:

On page 1, line 15, "flow of the" should read --flow and to--, and

On page 5, line 2, "diffuser 216." should read --diffuser 200.--.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 3745

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Havens (5,296,769). Havens discloses a motor-fan assembly (20), for use in a floor care appliance, that includes a housing (27), an armature (23), and a diffuser (25) in the form of a disc-shaped plate having a lower surface (35), a first plurality of vanes (37) located on the outer periphery of the plate, and a second plurality of vanes (36) located on the lower surface (35) of the plate. The first plurality of vanes (37) are airfoil shaped and angled downward to direct the flow towards the lower surface through apertures (38) in the periphery of the plate. Also, the second plurality of vanes (36) are spiral shaped. Further, Havens' diffuser reduces turbulence-induced noise (Havens column 5, lines 13-37).

Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents issued to Poon, Finkenbinder and Gilliland are cited as the state of the art.
